Postdoctoral Position

Two postdoctoral positions are available at the University of Rhode Island to work on the development of lithium-ion battery electrolytes and the reactions of the electrolyte with the surface of the electrode materials. Experience with manipulation of air sensitive compounds using glovebox, Schlenk, and high vacuum techniques, characterization of compounds using NMR and IR, surface analysis using XPS and SEM, thermal analysis using DSC and TGA, and electrochemical analysis using CV are desirable. The starting date should be during Spring or Summer of 2012.

Candidates should send CV by email to:
